Checklist Requirements

Requirement Description

Elegant database design for tracking leads, market research, GP opportunities and deal distribution

Reliable and up-to-date data. Able to consistently represent key data attributes as correct and valid

Complete record sets representing real world happenings and entities. No missed representation in the system

Information about the marketplace is contained and made available to the right audience, without over-exposing information across resources

System is easy to train, use, find data, and manage information

System preserves data safety and prevents unauthorized access; easily manages which users can access functional aspects and data subsets

Can access the system directly without desktop or other server dependencies; can access from Outlook and mobile and portal

Mobile access supports HTML 5 and is device independent

Users can store documents on any chosen record type/entity, and integrate with enterprise document management system

Original Lead inputs are confirmed, and Lead is updated with authorized business qualification process

Disqualified leads are closed in a timely manner and converted without re-entry or loss of baseline information

Leads convert to next-best action, allowing both opportunity or QTO processes

Leads allow capture of current and scheduled activities

Sales Opportunities are captured and managed in appropriate manner for the magnitude of each deal

Opportunities allow appropriate, timely tracking of wins and losses with good comprehension of why the business was won or lost

Quotes can be published in various ways based on scale and formality needed

Quotes can be internally approved easily with one or a few clicks

Managers can see and control which seller is assigned to which account

Sales managers can detect threats to existing business account relationships

Email delivery and interaction statistics are measured

Digital interaction is tracked to the originating email message and prospect/customer

Lists or targeted audiences can be managed and grouped without duplicates when used in campaigns

Email and SMS distribution occurs without being considered spam; able to use white-listed servers

Email messages can be created using templated and creative content and HTML with graphics from a digital library

The business actively manages and normalizes or prevents duplicate records

Business transactions and interactions are naturally tracked to the customer or prospect

Demographics and firmographics are managed and maintained so the marketplace can be segmented

All key interactions with targets can be tracked in near real time

Tardy scheduled activities can alert the resource to catch up

QR/manual check-in creates Showroom visit record in CRM with Contact lookup, timestamp, visit purpose and assigned sales associate

Automatic thank-you email, VIP alerts to Sales, and follow-up task if no action within 48 hours of visit

Dashboard: total visits/month, visitor segments, repeat vs new, high-value visitors, visit-to-opportunity conversion
